

Comparison of Server and Cloud-Based Software Costs

How to Calculate Relative IT Costs

01

#1 Infrastructure

The factors that determine infrastructure costs are different for server and cloud-based solutions. Depending on the size of your practice, your infrastructure costs can add up. For example, servers can cost between \$4k to \$30K.

02

#2 IT Administration

Managing software and related hardware can be one of the most significant costs of operating enterprise software.

03

#3 Ongoing Maintenance

Reducing the cost and effort of upgrades contributes to lowering your total cost of ownership (TCO) overall.

04

#4 Software Licensing

How your software is licensed can have a huge impact on set up costs. When delivered as a cloud-based solution, you do not have to pay an initial lump sum upfront as you're subscribing to the software instead of licensing it.

Consider the full spectrum of direct and indirect costs

Understanding your total cost of ownership can be challenging. When you consider all the direct and indirect costs, subscribing to cloud-based ChiroTouch can usher in more money, time, and efficiency savings. [Read the article to learn more.](#)
